

Artykuły w czasopismach naukowych

1. **M. Mulak**, J. Mulak, *Inadequacy of the fitted crystal-field parameterizations. Case study: the fourth-order crystal-field splitting moment in cubic systems*, Physica Status Solidi (b) **259**, art. 2200005 (2022).
2. **M. Mulak**, J. Mulak, *Single-state crystal field parametrization in the cubic symmetry systems*, Physica Status Solidi (b) **258**, art. 2100057 (2021).
3. **M. Mulak**, J. Mulak, *Crystal field rotational invariants: a new light on the crystal field effects*, Physica Status Solidi (b) **257**, art. 2000064 (2020).
4. **M. Mulak**, J. Mulak, *Do we properly understand the fitted crystal-field parameters?*, Physica Status Solidi (b) **256**, art. 1900179 (2019).
5. **M. Mulak**, J. Mulak, *The second and third crystal field splitting moments in verification of the trigonal and hexagonal crystal field parametrizations*, Physica Status Solidi (b) **255**, art. 1800115 (2018).
6. **M. Mulak**, J. Mulak, *The crystal field splitting third moment in crystal field analysis: the tetragonal symmetry case*, Physica Status Solidi (b) **254**, art. 1700109 (2017).
7. **M. Mulak**, J. Mulak, *The crystal-field splitting third moment in determination of the crystal-field Hamiltonian parametrization. The cubic symmetry case*, Physica Status Solidi (b) **253**, 1616–1622 (2016).
8. **M. Mulak**, J. Mulak, *A direct algebraic parametrization of the high-symmetry crystal-field Hamiltonians*, Physica Status Solidi (b) **252**, 2209–2214 (2015).
9. **M. Mulak**, J. Mulak, *A groundwork for crystal-field Hamiltonian parametrization*, Physica Status Solidi (b) **251**, 1523–1530 (2014).
10. **M. Mulak**, J. Mulak, *Verification of the fitted crystal-field Hamiltonian parametrization by the crystal-field splitting second moment*, Physica Status Solidi (b) **250**, 1320–1326 (2013).
11. J. Mulak, **M. Mulak**, *Capability of the free-ion eigenstates for crystal-field splitting*, Journal of Modern Physics **2**, 1373–1389 (2011).
12. J. Mulak, **M. Mulak**, *A fundamental requirement for crystal-field parametrization*, Physica Status Solidi (b) **248**, 2159–2164 (2011).
13. J. Mulak, **M. Mulak**, *The limits of the total crystal-field splittings*, Physica Status Solidi (b) **247**, 202–212 (2010).
14. J. Mulak, **M. Mulak**, *The total energy splitting of ionic eigenstates in the axial crystal fields*, Physica Status Solidi (b) **246**, 1931–1938 (2009).
15. J. Mulak, **M. Mulak**, *Multipole characteristics of the open-shell electron eigenstates*, Physica Status Solidi (b) **245**, 1156–1164 (2008).
16. J. Mulak, **M. Mulak**, *On a complementary scale of crystal-field strength*, Journal of Physics A: Mathematical and Theoretical **40**, 2063–2076 (2007).
17. J. Mulak, **M. Mulak**, R. Gonczarek, *The maximal axial parameters in equivalent parametrizations of high symmetry crystal-field Hamiltonians*, Physica Status Solidi (b) **244**, 505–517 (2007).
18. J. Mulak, **M. Mulak**, *The maximal axial components in the equivalent parametrizations of crystal-field Hamiltonians*, Physica Status Solidi (b) **243**, 2796–2810 (2006).

19. J. Mulak, **M. Mulak**, *The quadrupolar term in the equivalent crystal-field Hamiltonians for various central-ion point symmetries*, Journal of Physics A: Mathematical and General **39**, 6919–6931 (2006).
20. J. Mulak, **M. Mulak**, *On standardization of crystal-field Hamiltonians parametrization: triclinic symmetry case*, Journal of Physics A: Mathematical and General **38**, 6081–6090 (2005).
21. R. Gonczarek, M. Krzyżosiak, **M. Mulak**, *Valuation of characteristic ratios for high- T_c superconductors with anisotropic gap in the conformal transformation method*, Journal of Physics A: Mathematical and General **37**, 4899–4911 (2004).
22. R. Gonczarek, M. Gładysiewicz, **M. Mulak**, *Equilibrium states and thermodynamical properties of D-wave paired HTSC in the tight-binding model*, Physica Status Solidi (b) **233**, 351–363 (2002).
23. M. Gładysiewicz, R. Gonczarek, **M. Mulak**, *The form and properties of the tight-binding density of states in two dimensions: Possible application to superconductivity*, Acta Physica Polonica A **101**, 865–874 (2002).
24. W. Kumala, R. Gonczarek, **M. Mulak**, *Influence of the energy gap shape on the thermodynamic properties of D-wave superconductors*, Molecular Physics Reports **34**, 28–35 (2001).
25. **M. Mulak**, R. Gonczarek, W. Kumala, *On the enhancement of T_c due to singularities of EDOS in BCS gap equation*, Molecular Physics Reports **34**, 70–75 (2001).
26. R. Gonczarek, M. Gładysiewicz, **M. Mulak**, *On possible formalism of anisotropic Fermi liquid and BCS type superconductivity*, International Journal of Modern Physics B **15**, 491–510 (2001).
27. M. Gładysiewicz, R. Gonczarek, **M. Mulak**, *The form of energy gap and critical temperature of superconductor implied by fluctuations of density of states*, Acta Physica Polonica A **97**, 1039–1051 (2000).
28. W. Kumala, R. Gonczarek, **M. Mulak**, *Thermodynamic properties of D-wave paired superconductors in the low temperature and subcritical regions*, Acta Physica Polonica A **97**, 693–703 (2000).
29. R. Gonczarek, **M. Mulak**, W. Kumala, *Thermodynamic properties of D-wave paired superconductors*, Acta Physica Polonica A **95**, 231–242 (1999).
30. R. Gonczarek, **M. Mulak**, *Enhancement of critical temperature of superconductors implied by the local fluctuation of EDOS*, Physics Letters A **251**, 262–268 (1999).
31. R. Gonczarek, **M. Mulak**, *Interplay between the energy gap and heat capacity in S-wave superconductor*, Physica Status Solidi (b) **208**, 457–463 (1998).
32. **M. Mulak**, R. Gonczarek, *Generalized BCS type energy gap equation and its thermodynamic consequences*, Molecular Physics Reports **20**, 181–188 (1997).
33. **M. Mulak**, R. Gonczarek, *Discontinuous phase transitions in S-paired Fermi systems*, Acta Physica Polonica A **92**, 1177–1189 (1997).
34. **M. Mulak**, R. Gonczarek, *On thermodynamics properties of statistical spin liquids*, Czechoslovak Journal of Physics **46**, 3379–3380 (1996).
35. R. Gonczarek, **M. Mulak**, *Fluctuations of critical temperature and phase transitions in films of superfluid helium-3*, Czechoslovak Journal of Physics **46**, 449–450 (1996).
36. **M. Mulak**, R. Gonczarek, *Structures of thermodynamic functions for S-paired Fermi systems in parametric equations approach*, Acta Physica Polonica A **89**, 689–698 (1996).

37. **M. Mulak**, R. Gonczarek, *Fraktalna struktura stanów podstawowych jednowymiarowego modelu Isinga*, *Postępy Fizyki* **46**, 315–326 (1995).
38. R. Gonczarek, **M. Mulak**, *Parametric equations for the energy gap: Extended BCS case*, *Acta Physica Polonica A* **86**, 1007–1014 (1994).
39. R. Gonczarek, **M. Mulak**, *Conditions for the Cooper pair creation in 2- up to 3-dimensional Fermi liquids*, *Acta Physica Polonica A* **86**, 929–938 (1994).

Publikacje konferencyjne i dydaktyczne

1. **M. Mulak**, M. Pluta, *Lessons from scaling*, Proceedings of the SEFI Conference: Physics Teaching in Engineering Educations (PTEE 2009), Wrocław 2009, s. 97–100.
2. **M. Mulak**, P. Scharoch, E. Wnuczak, *Międzywydziałowe kursy fizyki ogólnej w języku angielskim i niemieckim na Politechnice Wrocławskiej. Sześć lat doświadczeń*, XIV Konferencja Nauczanie fizyki w wyższych szkołach technicznych, Bydgoszcz 2004, s. 35–40.
3. **M. Mulak**, P. Scharoch, E. Wnuczak, *Międzywydziałowe kursy fizyki w językach angielskim i niemieckim na Politechnice Wrocławskiej*, XIII Konferencja Nauczanie fizyki w wyższych szkołach technicznych, Wrocław 2000, s. 282–285.
4. R. Gonczarek, **M. Mulak**, *Enhancement of critical temperature of superconductors implied by the local fluctuation of EDOS*, 11th Seminar on Phase Transitions and Critical Phenomena, Wrocław–Polanica Zdrój 1998, s. 87–93.

Rozprawa doktorska

M. Mulak, *Uogólnione równanie na szczelinę dla układu Fermiego ze sparowaniem typu S i jego konsekwencje termodynamiczne*, Instytut Fizyki Politechniki Wrocławskiej, Wrocław 1997.
Promotor: prof. dr hab. Ryszard Gonczarek.
